Overcoming Health Barriers in Somali and East African Communities of Minnesota

A comprehensive understanding of the needs, knowledge, religious and cultural beliefs about general and sexual health is critical to improving the health and wellness of refugee youth and families in the Somali and East African communities of Minnesota. This training, led by Dr. Osman M. Ahmed, will cover health promotion and education, disease prevention, religious and economic barriers, myths and facts about contraceptive use and sexual health issues.

Participants will leave with a clearer understanding of what is needed to engage these communities, overcome barriers and provide culturally responsive services and support.

September 18th, 2008

Location:

9:00 a.m. - 12:00 p.m.
